

Insta Mark 106

The Insta Mark 106 is the newest member to the Insta Mark family. It has the smallest marking head available at .340 diameter.

This uniquely sealed air tight container is designed with automatic marking in mind.

The long barreled marking head design has built in snap rings for easy insertion and removal.

It also supports 2X the ink storage of the 116.

In addition, the air tight cap does not need the handle portion on order to snap on. This feature makes it easy to enclose the marking head without removing it from the automated unit.
